

WHOLE-HOME NETWORK PROPOSAL · PREPARED FOR JEFF COX

Wi-Fi that works in every room

9711 Roundtable Ct, Hillsboro MO · Site visit Saturday, August 22, 2026 · Prepared by Nathan Morris

Jeff — you're paying for gigabit internet and it arrives at the house just fine. The problem starts at the router. A Nighthawk off the shelf is a good product for what it was built to do — a small home, a dozen devices, one floor. Your house is 1,783 square feet on the main floor, a full basement, a yard, and 25+ devices. One box was never going to cover it.

Why a TV ten feet from the router still buffers

One radio, turned all the way up

To reach the far bedroom and the back yard from a single spot, that router runs its radio wide open. A loud, wide signal also picks up every neighbor's Wi-Fi in range, so your devices end up shouting over a crowded room.

Your TV whispers back

The router is loud. The TV isn't — one small antenna tucked behind a metal panel, answering at a fraction of the router's power. Your TV shows full bars while the router struggles to hear it. That's the buffering.

Wi-Fi is the wrong tool for a TV

A TV never moves, so the surest fix is a cable to it — then it stops competing for airtime entirely. That jack is a \$250 add on any package.

Two fixes, and they stack: replace one loud radio with several quiet ones so nothing fights for airtime, and hardwire the TV so it never has to compete at all. We'll confirm exactly what's happening at your house with a Wi-Fi analyzer before anything gets ordered.

Wi-Fi 7 is the first Wi-Fi that can actually use your gigabit

- **Wi-Fi 5 and 6 top out below your internet speed.** Even standing next to the router, the Nighthawk hands your phone a fraction of the gigabit you pay for. The rest is wasted every month.
- **Wi-Fi 7 opens a third lane.** It adds the new 6 GHz band — wide open, and twice as wide as the old one. That's how a phone finally gets gigabit-plus over the air.
- **It's already in your pocket.** Recent iPhones, Galaxy phones and laptops have Wi-Fi 7 built in. Everything older still connects and still runs better, because the crowd gets spread across several access points instead of one box.

Today vs. after

Dashed lines are Cat6 cable we run inside the walls and ceilings. Green shading is Wi-Fi coverage.

SITE PLAN

Your home, and where everything goes

Preliminary layout. Once you've picked a package and signed, we measure the house and produce an accurate plan showing exactly where every access point and cable run goes — yours to keep, and what we build from.

Home details

Prepared for	Jeff Cox
Address	9711 Roundtable Ct, Hillsboro
Style	Single-story brick ranch, built 2007
Main floor	1,783 sq ft finished
Basement	Full, same footprint
Garage	Attached, 461 sq ft
Lot	0.69 acre
Internet	Gigabit — 1,000 Mbps
Devices today	25+ and growing

Install timeline

Today, Aug 22	Site walk. Confirm cable paths and equipment spot. Final price locked.
On acceptance	50% deposit, non-refundable once the equipment goes on order. Ubiquiti ships from the distributor, and that lead time sets the install date.
Fri, Sept 4 — day one	Cable day. Every run pulled, terminated, tested with a certifier and labeled both ends.
Sat, Sept 5 — day two	Equipment day. Gateway, switch and access points mounted and configured, all three networks built, every device moved onto the right one.
Before we leave	App on your phone, every room speed-tested with you watching, old Nighthawk handed back.
After	Balance due. 10-year workmanship guarantee. Call Nathan directly.

THE HARDWARE

What we're installing

All Ubiquiti UniFi — the same gear we put in offices and schools, sized for a house. No subscriptions, no monthly fees, one app on your phone. Pictured: the Ultimate package.

**THE BRAIN****Cloud Gateway Fiber**

Replaces the Nighthawk as your router. Firewall and threat blocking built in, ready for internet up to 10 gigabit. Budget uses the Dream Router 7 instead — same readiness, with Wi-Fi built into the box.

**THE HUB****PoE Switch**

Every cable in the house plugs in here. It also powers the access points through that same cable, so no outlets are needed up in the ceiling.

**INDOOR WI-FI****U7 Pro (Wi-Fi 7)**

Smoke-detector sized, mounts flat on the ceiling. Two on the main floor, one in the basement. Your phone hands off between them without you noticing.

**OUTDOOR WI-FI****U7 Outdoor (Wi-Fi 7)**

Weatherproof, under the eave or on the deck. Covers the patio, yard and driveway. Built for Missouri heat, ice and rain.

How it all connects

Three separate networks, so nothing slows down anything else

This is the part a store-bought router can't do, and it's half the reason your devices drop today. Smart-home gadgets — thermostats, plugs, doorbells, garage openers, the robot vacuum — only speak the old, slow 2.4 GHz band. On a router that shares one network name across every band, those slow devices hog the airwaves, confuse the fast ones, and randomly fall off. We split them up:

NETWORK NAME	BAND	WHO'S ON IT
Cox	5 GHz + 6 GHz only	Phones, laptops, tablets, game consoles. Fast lanes only, so they never get stuck behind a slow device.
Cox-Devices	2.4 GHz only	Thermostat, smart plugs, doorbell, cameras, vacuum. A stable band built for them, and they can't touch your laptops or your TVs.
Cox-Guest	All bands, isolated	Visitors. Internet only — they can't see your computers, your cameras, or anything else in the house.

Names are yours to change — we've used Cox as the starting point. We set all three up, put every device on the right one, and walk you through it in the app before we leave.

FOUR WAYS TO DO THIS

Pick your package

Jeff Cox · 9711 Roundtable Ct · August 22, 2026 · Valid 30 days · Install held for **Fri Sept 4 & Sat Sept 5**

BUDGET	STARTER	PRO	ULTIMATE
Saver Wi-Fi 7	Full Interior Coverage	Recommended	Future Proof
\$1,195 Most Wi-Fi 7 for the least money	\$2,095 Proper access points, both floors	\$2,845 Full Wi-Fi 7 with 6 GHz	\$3,495 Everything in Pro, plus outside
• Dream Router 7 — router, switch and a Wi-Fi 7 radio in one box, in the basement • Patch panel + all patch cables • 1 × U7 Lite access point, main floor ceiling • 1 wired connection • 3 networks, app setup	• Cloud Gateway Fiber, 10-gig ready • 8-port gigabit PoE switch + power supply • Patch panel + all patch cables • 2 × U7 Pro access points, main floor + basement ceiling • 2 wired connections • 3 networks, app setup	• Cloud Gateway Fiber, 10-gig ready • 2.5G PoE switch + power supply • Patch panel + all patch cables • 3 × U7 Pro access points, 2 main floor + basement • 3 wired connections • 3 networks, per-room tuning, speed test in every room	• Cloud Gateway Fiber, 10-gig ready • 2.5G PoE switch + power supply • Patch panel + all patch cables • 3 × U7 Pro + U7 Outdoor for deck, yard, driveway • 4 wired connections — all four access points • Battery backup so the network rides through a power blip • 3 networks, full tuning, speed test every room and the yard
Two Wi-Fi 7 zones for the lowest price we can build. The ceiling unit is the Lite, so no 6 GHz upstairs, and one unit leaves the far bedroom and the yard weak.	Both access points go in the ceiling where they belong and the gateway moves to a dedicated box. Two zones instead of three, so the far end is good rather than excellent.	Why this one: the U7 Pro adds the 6 GHz band — the difference between "better" and actually seeing 1,000+ Mbps on your phone. Three access points means no weak corner anywhere.	Future proof: everything Pro has, plus the yard, plus a battery so a flicker in the power doesn't take the house down. When your provider offers 2, 5 or 10 gig you change nothing — it's already rated for it.

This is more than a router from Best Buy, and it should be. A Nighthawk is a box you'll replace again in three years. This is infrastructure — cable inside the walls, commercial equipment, and a network built around your house. Every package uses the same 10-gigabit-ready gateway, so stepping up later means adding an access point, not starting over.

Options — add to any package

ADD-ON	PRICE
Wired TV jack — takes a TV off Wi-Fi completely, the surest fix for buffering	\$250
Extra wired jack — office, gaming PC, second TV, future camera	\$250 each
Additional access point — indoor or outdoor, includes its wired connection	\$525
UniFi G4 Doorbell Pro — 2-way talk and package detection, records to your own gateway, no monthly fee	\$795
UniFi 5G Max backup internet — cellular takes over automatically if your provider drops. Data plan extra	\$775
Wall-mounted equipment rack — a hinged rack instead of a backboard	\$195
Battery backup — rides through a short power blip. Included in Ultimate	\$125

AFTER THE INSTALL

Support, and what's included

Support is optional and the system works without it — the workmanship guarantee is included no matter what. These are for when you'd rather text me than troubleshoot. **Start a year of either plan and 5% comes off your package price.**

Network Support

\$30 / month

Billed \$180 every six months

- We monitor the network remotely and usually see a problem before you do
- Firmware kept current on the gateway, switch and access points
- Unlimited remote fixes — reboots, reconnects, new device setup, network changes
- Priority scheduling if something needs a visit
- Covers the network gear we installed

Full IT Support

\$50 / month

Billed \$300 every six months

- Everything in Network Support, plus:
- **Phone support for every device in the house** — laptops, phones, tablets, printers, smart TVs, thermostats, cameras
- Help with new devices: on the right network, set up, working
- Password and account help, printer problems, "why won't this connect"
- One number to call instead of five different support lines

Neither plan is required and you can add one later — the 5% package discount applies when a year is started at install. Both plans are billed every six months. Equipment failures are covered by the warranty on the next page either way.

Included in every package

- All cable, jacks, wall plates and mounts
- **12-port patch panel and every patch cable**, so each room has a labeled port
- All power supplies for the gateway and switch
- Every connection certified with a tester and labeled both ends
- Equipment mounted on a backboard in the basement (upgrade to a wall rack for \$195)
- All three networks configured, every device moved onto the right one
- Old Nighthawk removed and handed back to you
- Speed test in every room before we leave
- 10-year workmanship guarantee and 1-year equipment warranty

Not included

- Your internet service or the provider's modem
- Drywall patching beyond the small openings we cut for jacks
- One standard power outlet at the equipment location
- Cameras, video doorbell, smart locks — happy to quote those next
- Repairs to devices that were already broken

What it's like to live with

- **One name, whole house.** Kitchen to basement to deck, your phone just stays on.
- **One app.** See every device, pause the kids' tablets at dinner, get a ping if the internet drops.
- **No mesh compromise.** Big-box kits talk to each other over Wi-Fi and lose half their speed doing it. Every one of our access points is wired, so each delivers full speed.

TERMS

Terms and acceptance

Take 5% off any package when you start a year of either support plan — \$60 off Budget, \$105 off Starter, \$142 off Pro, or \$175 off Ultimate.

Payment — half now, half when it works

PACKAGE	LIST	WITH SUPPORT PLAN	50% AT ACCEPTANCE	50% ON COMPLETION
Budget · Saver Wi-Fi 7	\$1,195	\$1,135	\$568	\$567
Starter · Full Interior Coverage	\$2,095	\$1,990	\$995	\$995
Pro · recommended	\$2,845	\$2,703	\$1,352	\$1,351
Ultimate · future proof	\$3,495	\$3,320	\$1,660	\$1,660

The deposit covers the equipment order and is **non-refundable once that equipment is ordered**. The balance isn't due until every room is speed-tested with you standing there. Deposit and balance above are figured on the discounted price; without a support plan it's half of list instead. Options are added to the balance, not the deposit.

Warranty

WHAT	HOW LONG	WHAT IT COVERS
Workmanship	10 years	Everything we physically did — cable runs and terminations, jacks, patch panel, mounts, and the configuration at handover. If a connection we made fails, we come back and fix it at no charge. Transfers to the next owner if you sell.
Equipment	1 year	The gateway, switch and access points. If a unit fails in the first year we replace it and install the replacement at no charge. After that, manufacturer coverage applies and we handle the claim; labor to swap it is billed at our normal rate, or free on either support plan.

Not covered either way: damage from water, power surges, lightning, pets or other trades; equipment you supply or move yourself; and changes made to the configuration by someone else.

Acceptance
