--	--	---	---	---

What you'll get

The speed you pay for, in every room

Your gigabit plan stops dying halfway down the hall. Strong Wi-Fi on both floors — the theater, the sport bar, the bedrooms — including the TVs that drop.

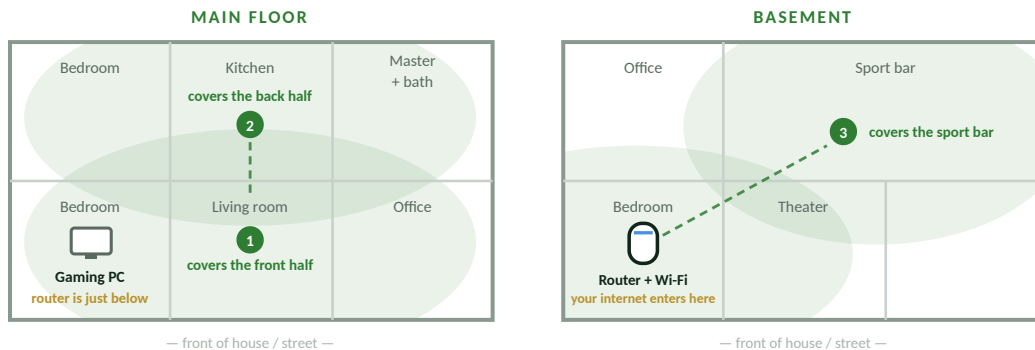

One name, one password

Walk anywhere and your phone stays connected — it hands off between radios by itself. Nothing to switch or reconnect.

Room for everything you own

Every TV, console, camera and thermostat joins without slowing the house down. Guests get a network that can't see your things.

Where everything goes

Layout from our walkthrough — schematic, not to scale. Green = strong Wi-Fi; dashed = the radios talking to each other. The router sits out on the end table rather than inside the closet, reached by a flat cable under the door — nothing drilled, nothing mounted. Final spots confirmed on install day.

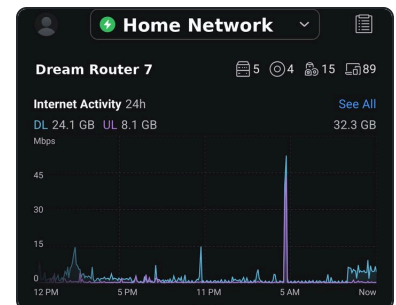

Get the app

iPhone & iPad
App Store

Android
Google Play

Point your camera at the square for your phone, or search **UniFi** by Ubiquiti. We'll get you signed in before we leave on the 4th. From there: every device, speed tests, pause a tablet, share the guest network — from anywhere.

You're covered for a year

A full year of support on the network we install — questions, tuning, adding a device, or something acting up. You call me, not a call center. Workmanship is warranted ten years, and it transfers if you sell the house.

Three networks — pick the one that fits

EVERYDAY

Cox

PASSWORD

themasters@9711

Phones, laptops, tablets, the desktop, TVs and streaming boxes. Anything you sit down and use. This is the fast one.

Scan to join.
Point your camera at the square —
no password typing.

SMART HOME

Cox-Devices

PASSWORD

themasters@9711

Lights, plugs, thermostats, cameras, doorbell, garage, speakers. They sit in their own lane so they can't slow down the computers or see them.

Scan to join.
Point your camera at the square —
no password typing.

VISITORS — START HERE

Cox-Guest

PASSWORD

3145010707

Anyone who comes over. Full speed internet, and it can't see a single other thing on the network. This is the one to hand out.

Scan to join.
Point your camera at the square —
no password typing.

The home network

UniFi Dream Router 7

×1 • WITH WI-FI BUILT IN

Runs the network and the firewall, with its own Wi-Fi 7 radio on board.

UniFi U7 Pro

×3 • ACCESS POINTS

Three more Wi-Fi 7 radios placed through the house so coverage overlaps instead of fading.

Wi-Fi 7 desktop card

×1 • TRI-BAND PCIE

Puts the desktop on the new network at full speed instead of an old adapter.

Built to grow with the house

Add coverage later

Shop, garage or patio? One more access point joins in minutes.

Add a wired jack

A desk or a TV that has to be rock solid — the gear already supports it.

Add a doorbell or cameras

Same app, same system, same login. Nothing else to buy into.

Built on the current standard

Wi-Fi 7 is what new phones, laptops and TVs are built for.

WHO BUILT THIS

Like what you're connected to?

We're a licensed and insured low-voltage contractor working across the St. Louis and Kansas City metros — whole-home Wi-Fi, wired networking, cameras, doorbells and structured cabling. Same design work on a three-bedroom ranch as on a commercial building. Call or text and we'll walk your house.

\$100 + \$100

Both of you get paid

Book a package with GCC and mention **Jeff Cox** — you get **\$100 off your install**, and we send Jeff **\$100** after yours is finished.

No limit on either side, and it applies to any package we quote. Just say his name when you call.
