

GCC LLC

Division 27 & 28 Low-Voltage Contractor • KCMO / STL

PROPOSAL FOR

Whole-Home Network & Security — Morris Residence

Prepared for:	Sarah Chen
Address:	1247 Oak Hollow Ln, Wildwood MO 63038
Date:	2026-04-21
Valid through:	2026-06-20

01 — Hi Sarah

Thanks for the walkthrough on Saturday. You told me the single biggest frustration is that the WiFi drops in the primary bedroom and the basement gym — the current router is in the office and it just can't reach. That's a solvable problem, and we're going to solve it with real cable to ceiling access points, not another mesh puck in the hallway.

Here's what we're proposing: new network cable to twelve spots in the house — the TVs, your home office, the kitchen, and the ceiling-mounted WiFi access points we'll add in strategic locations. A structured-media panel in the basement mechanical room where everything comes together. Plus four exterior cameras and one interior camera for the mudroom / garage entry. Our work comes with a lifetime warranty on the workmanship — if we install a cable and it ever gives you trouble, we come back and fix it, whether that's next month or fifteen years from now. And if you sell the house, the warranty transfers to the next owner.

Happy to answer any questions before you sign. My cell is on the signed contract — just text me.

Kaitlyn

02 — What You're Getting

Total Price: \$14,850

One-sentence summary: Real cable to twelve network spots, four ceiling WiFi access points for whole-home coverage, five cameras, and a clean panel in the basement.

- Every cable certified with a professional tester, and you get the test report when we're done
- Every data cable is the high-grade kind that handles gigabit speeds and will handle whatever comes next
- Lifetime warranty on our workmanship — transfers if you sell the house
- We have never missed a project completion date

03 — Who's Working on Your Home

GCC LLC is a licensed, insured low-voltage contractor based in St. Peters. Two-person minimum on site — never a single tech coming alone. Background-checked crew, uniformed, with company vehicles clearly marked with our logo.

Fully licensed and insured. \$2M general liability, statutory workers' comp, \$1M auto. Certificates available on request.

04 — What We're Installing

Home Network. We'll install future-proof network cable from a central panel to twelve spots in your house — the two TVs, your office, the kitchen island, the smart-home hub location, and each of the four WiFi access points. The panel sits in the basement mechanical room near the existing electrical panel, and from there

every cable routes to wherever you need it.

Equipment we'll install:

- Twelve data drops (the outlets you see in each room)
- Four ceiling-mounted WiFi access points for whole-home coverage (primary bedroom, basement gym, main level, upstairs hallway)
- One structured-media panel — 42-inch recessed, with hinged cover
- Router, switch, and AP controller (equipment listed below)

Home Security. Five cameras total: four exterior (front door, back patio, driveway, side yard) and one interior covering the mudroom / garage entry. All cameras are IP-based, PoE-powered from the network switch (no separate power runs), and record to a local network video recorder that stays in the panel.

4.1 Equipment list

Item	Make / Model	Included
Router	Ubiquiti UDM Pro	Yes
24-port PoE switch	Ubiquiti UniFi Pro Max 24 PoE	Yes
WiFi access points (4)	Ubiquiti U7 Pro Wall	Yes
NVR (for cameras)	Ubiquiti UNVR	Yes
Cameras (5)	Ubiquiti G5 Pro	Yes
Structured-media panel	Legrand 42-inch recessed	Yes

4.2 Things we're not covering

- ISP setup — you call Spectrum to activate service; we time our work to match
- Drywall patching beyond small access holes at outlet locations
- Low-voltage lighting or smart-home controls beyond the network itself
- TV wall-mounting — we can recommend a handyman

05 — How It'll Go

Three consecutive days on site, with you home on Day 1 in the morning to confirm final placement of cameras and access points. After that we can work while you're at the office.

1. Day 1 (Monday): Walk the house, confirm placements, start cable pull. You should be home 8–10 AM.
2. Day 2 (Tuesday): Finish cable pull, start termination and equipment install.
3. Day 3 (Wednesday): Certification testing, camera install, walkthrough. You should be home 3–5 PM for the walkthrough.

06 — What It Costs

Total Price: \$14,850

- 30% deposit due at contract signing (\$4,455) — that covers material ordering
- 40% due when material arrives on site (\$5,940)
- 30% due at completion walkthrough (\$4,455)

What's included: installation, materials, testing, lifetime warranty, walkthrough.

If you want to add on a monthly maintenance plan: we offer a Managed Services option for \$125 / month — we monitor the network, push updates, and swap gear under warranty without you having to call.

Month-to-month, cancel any time.

07 — Warranty

Lifetime workmanship — transfers with the property.

Every cable we install, every termination we make, for as long as the wires are in service. If something we installed ever stops working, we come back and fix it. Equipment has its own manufacturer warranty (two years on Ubiquiti), and the GCC-furnished hardware is covered for five years of advance replacement through us.

08 — Next Steps

1. Read this over.
2. Text or call me if you have questions — (636) 224-8192 or corporate@greencommllc.com.
3. If you're ready to go, sign the last page and send back — photo, scan, or DocuSign, however's easiest.
4. We schedule a start date and get going.

09 — Terms & Conditions (summary)

This proposal becomes a binding contract on written acceptance. Price is firm through the validity date on the cover page. Scope is exactly what's listed in Section 04; anything not listed is excluded. Changes are documented on written Change Orders at 10% markup. GCC carries full residential insurance. Missouri law governs. Full terms available on request.

10 — Acceptance

By signing below, Sarah Chen accepts this proposal for Whole-Home Network & Security at the total price of \$14,850.
